

Green Purchasing Policy

The MHL Collection is committed to sustainable procurement as the procurement of goods & services can have both a positive & negative environmental impact.

Climate change is a global issue which will affect our future generations.

MHL have a responsibility to mitigate the environmental impact by using eco-friendly & sustainable suppliers & produce.

MHL carry out its green purchasing policy via the following –

- MHL procurement policy is to choose products that are less damaging to the environment.
- Our goal is to purchase sustainable products and services, without compromising the performances of our company.
- MHL also strive to use Fair Trade & Eco Certified suppliers.
- Through the purchase of local products, we strive to reduce the CO2 emission caused by transportation. The hotels try to make orders as large as possible from the least number of suppliers.
- Waste can be reduced by choosing reusable products and compostable materials. Our aim is to avoid or reduce the amount of waste going to landfill.
- Implement energy & water saving measures by buying energy efficient equipment. Each hotel monitors energy & water usage. The hotel management team regularly review data to initiate best practice to reduce energy & water consumption.
- Sustainable building materials used during construction and / or renovation.
